

Apply the Parallel Axis Theorem to a Rectangle ...

How find I_{base} ?

Use PAT:

$$I_{base} = \bar{I} + Ad^2$$

$$A = (b)(h)$$

$$d = (h/2)$$

$$I_{base} = \frac{1}{12}bh^3 + (b \cdot h)\left(\frac{h}{2}\right)^2$$

$$= bh^3 \left(\frac{1}{12} + \frac{1}{4} \right)$$

$$\left. \begin{matrix} 3/12 \\ 4/12 \end{matrix} \right\} \frac{4}{12} = \frac{1}{3}$$

$$I_{base} = \frac{1}{3}bh^3$$
