

Top: 15 lb

Each leg: 2 lb

• Find C_G of table
($\bar{x}$, $\bar{y}$, $\bar{z}$)

• Overturn angle

TOTAL WT = 15 + 4(2) = 23 lb

PLAN:

No	(lb) wt	$\bar{x}$	$\bar{y}$	$\bar{z}$ (ft)
①	15	2	2	3
②	2	4	0	1.5
③	2	4	4	1.5
④	2	0	4	1.5
⑤	2	0	0	1.5
	23 lb			

$\sum \bar{x} W_i = 46$

$\sum \bar{y} W_i = 46$

$\sum \bar{z} W_i = 57$

$\bar{x} = 46/23 = 2 \text{ ft} = \bar{x}$

$\bar{y} = 46/23 = 2 \text{ ft} = \bar{y}$

$\bar{z} = 57/23 = 2.478 \text{ ft} = \bar{z}$

By symmetry

As table
tilts

$\theta = \tan^{-1} 2/2.478$

$\theta = 38.9^\circ$

wt W ↓ rotated thru θ until it passes thru corner C.
