

Mohr's Circle for Area MOI (See Hibbeler Ex Prob 10.9)

$$I_x = \sum (\bar{I} + Ad^2) = \frac{1}{12} (400)(100)^3 + 2 \left[\frac{1}{12} (100)(400)^3 + 100(400)(150)^2 \right]$$

$$I_x = 33.33 \cdot 10^6 + 2(1.433 \cdot 10^9)$$

$$I_x = 2.90 \cdot 10^9 \text{ mm}^4$$

$$I_y = \sum (\bar{I} + Ad^2) = \frac{1}{12} (100)(400)^3 + 2 \left[\frac{1}{12} (400)(100)^3 + (100)(400)(250)^2 \right]$$

$$= 533.33 \cdot 10^6 + 2(2.533 \cdot 10^9) = 5.60 \cdot 10^9 \text{ mm}^4 = I_y$$

$$I_{xy} = \sum (\bar{I}_{xy} + Ad_x d_y) = (400)(100)(+150)(-250) + (400)(100)(+250)(-150) = -3.0 \cdot 10^9 \text{ mm}^4 = I_{xy}$$

Center of circle: $I_{AVG} = \frac{I_x + I_y}{2} = \frac{2.9 + 5.6}{2} = 4.25 \cdot 10^9 \text{ mm}^4$

Radius = $\sqrt{\left(\frac{I_x - I_y}{2}\right)^2 + I_{xy}^2} = \left[\left(\frac{2.9 - 5.6}{2}\right)^2 + (-3)^2\right]^{1/2} = 3.29 \cdot 10^9 \text{ mm}^4$

$$\tan 2\theta_p = \frac{3}{4.25 - 2.9} = \frac{3}{1.35}$$

$$2\theta_p = 65.8^\circ$$

$$\theta_p = 32.9^\circ$$

This is the angle to the I_{MIN} axis!
